MARIANN LLOYD-SMITH

ALTRUISTIC. OBJECTIVE. IMPACTFUL

Trained as a negotiator in chemical disputes with a PhD from Law Faculty, University of Technology (UTS), Sydney, Mariann Lloyd-Smith has worked in the area of chemicals policy and waste management for three decades with women's organisations, NGOs, national governments, UNEP and the OECD. A former IPEN co-chair, she is currently Senior Policy Advisor to both IPEN and National Toxics Network (NTN). Mariann participated in the Stockholm Convention since its inception and was a member of the Expert Group on Climate Change and Chemicals. Mariann is committed to community right to know and helped establish Australia's National Pollutant Inventory. She provides much needed chemical information to those affected by contamination and industrial pollution and has assisted vulnerable communities to participate in chemical decision-making. Working both in the region and internationally, Mariann has helped families escape their highly contaminated sites, residents to stop polluting incineration and assisted communities in rejecting invasive unconventional gasfields.
